

Customs clearance the fast way

Maximum simplification of customs processes, the highest possible customs status, and fast, highly automated customs clearing – these are some of the most notable characteristics of Lufthansa Technik Logistik Services' extremely efficient customs services.

The expert in customs clearance of aviation material

Every year, LTLs moves goods with a customs value of over 12 billion euros. In 2014, we handled over 900,000 customs clearances and, in terms of export control, dealt with 4,500 consignments of dual-use products. We have a global presence and experience with customs in more than 30 countries. We support customers successfully with their international projects by serving as a competence center for their customs needs.

Authorized processing licenses and simplifications

Our relationship with the customs authorities around the globe is characterized by long years of good relations and a high level of trust. Through our work for more than 100 customers (airlines, MROs, OEMs and material brokers) and our involvement with various associations, we are well-represented internationally and up to date on current developments. Close alliances with our international branches in Asia, the Americas and Europe make a real difference. Moreover our AEO seal (Authorized Economic Operator) grants LTLs specific simplifications, such as faster approvals and fewer data records, e.g. when issuing advance notifications for import and exports.

Comprehensive customs service
