

Optimized supply and transportation speed

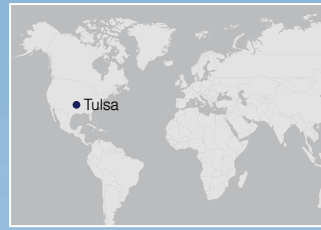

Lufthansa Technik Logistik Services // Pegasus is the name of a logistics project now coming to fruition with the introduction of L/transport at the pool storage facility in Frankfurt. The new transportation management system rolled out by Lufthansa Technik Logistik Services (LTLS) and Lufthansa Technik's Information Management sets world standards for optimizing supply and transportation products.

"What is unique about L/transport is the electronic integration of a variety of service providers and airlines, all of whom collaborate with Lufthansa Technik Logistik Services. L/transport finds the most favorable and fastest transportation option for a shipment from all those displayed," explains Project Manager Thomas Wilms. The ambitious performance objectives, defined for internal logistics and the European transportation network, have been achieved successfully. Pegasus has thus considerably enhanced the efficiency and reliability of Lufthansa Technik Logistik Services. //

Lufthansa Technik and Georgian Airways

15 years of cooperation // Lufthansa Technik and customer and partner Georgian Airways have celebrated their 15-year partnership in a ceremony in the Georgian capital Tbilisi. The cooperation started in 1999, when the airline became the official Georgian airline and put Western aircraft into service. Currently, Georgian Airways operates three Boeing 737 and four Bombardier CRJ100/200 aircraft. Lufthansa Technik delivers technical services under a Total Component Support (TCS®) contract, providing further support on request. On the occasion of the common ceremony Iase Zautashvili, General Director of Georgian Airways, said: "Since 1999 our relationship has been continuously strengthened and Georgian Airways highly appreciates not only the technical, but the moral support Lufthansa Technik provides. I would like to underline the professionalism and excellent technical maintenance Lufthansa Technik performs, giving us assurance in quality and flight safety." //

Maintenance support for Gulfstream

BizJet // Lufthansa Technik's subsidiary BizJet International has signed a supplier agreement for engine maintenance services with Gulfstream Aerospace Corporation, one of the leading manufacturers of business jets with the leading product support network in business aviation. The three-year agreement will provide Gulfstream with options for quality engine maintenance and customer support for the Gulfstream GII, GIII, GIV, G350 and G450 aircraft world-wide. "Becoming an engine services supplier to Gulfstream Aerospace is a tremendous accomplishment and honor for our Engine Services team here at BizJet," says Criss Berry, Vice President Engine Services at BizJet. "This represents a great collaboration." //

Joint landing gear services for SPPCA

Lufthansa Technik and Hawker Pacific // SPP Canada Aircraft, Inc. (SPPCA), a global provider of landing gear systems for commercial aircraft, has formed a business alliance for Product Support Services with Lufthansa Technik and Hawker Pacific Aerospace. The three parties have consolidated their partnership in a General Terms Agreement, after signing a Memorandum of Understanding in 2013. The agreement will allow customers to benefit from SPPCA's design and manufacturing know-how and Lufthansa Technik's MRO expertise as they provide aftermarket support services to SPPCA's landing gear components.

"We look forward to providing excellent MRO solutions for SPPCA's landing gears and to supporting SPPCA with the quality, value and commitment to service that are critical to their success in this competitive market," says Andreas Tielmann, Vice President Aircraft Systems at Lufthansa Technik. //
