

Hangar expansion on track

Lufthansa Technik Philippines

// Six months after the Manila-based aircraft maintenance, repair, and overhaul (MRO) provider broke ground in January to extend its main hangar, Lufthansa Technik Philippines' hangar extension is on track. "With the rising opportunities presented by regional growth, we have been building up our capabilities. This hangar expansion project is the latest in our continued efforts to meet different aircraft requirements and stay competitive in the market," says Dr. Burkhard Andrich, President and CEO of Lufthansa Technik Philippines (LTP). The construction expands two existing bays equipped with versatile docking systems that can accommodate current widebodies and newer models of the Airbus A350, Boeing 777-9X, and 787. This will also be Lufthansa Technik Philippines' second line for A380 base maintenance and its entry into Boeing 777 base maintenance. The development is expected to expand the company's yearly capacity by 200,000 manhours. //

Extension of contract with FedEx

Lufthansa Technik Logistik Services // Federal Express (FedEx) recently extended its existing transport contract with Lufthansa Technik Logistik Services (LTLS). FedEx is a logistics service provider that offers worldwide courier, express and parcel services (CEP) among others.

Lufthansa Technik Logistik Services' central transport procurement division in Hamburg negotiated the Lufthansa Technik Logistik Services import and export rates as well as the freight tariffs for Lufthansa Technik Component Services (LTCS)/ Lufthansa Technik Logistik America (LTLA). The logistics division of Lufthansa Technik Component Services is responsible for integrated transport and warehouse solutions and is an integral part of the global Lufthansa Technik Logistik Services logistics network. Transport costs were reduced significantly as a result of the central freight negotiations, resulting in an enhanced competitive edge for Lufthansa Technik.

Ingmar Bergman, Vice President Sales at FedEx, said: "We operate an airline ourselves and are part of this sector. We know only too well what is important for aviation companies in terms of their transport – whether especially fast transit times for urgently needed spare parts, customs clearance or documentation. We are all the more pleased therefore to continue the shared success story with Lufthansa Technik Logistik Services into the future." //

V2500 capability approved

Ameco Beijing // On June 30, 2015, Ameco's capability application of IAE V2500-A5 series engines has been approved by the Chinese CAAC as well as by the US aviation authority FAA and the European EASA. Thus, Ameco has been authorized to provide overhaul and modification on V2500-A5 series. The service on V2500-A5 engines as a new product will help promote Ameco Beijing's market competitiveness and support it to serve more customers at home and abroad. The first engine for overhaul was planned to the workshop in July. In addition to V2500-A5 series, the Beijing-based MRO provider overhauls PW4000 series and RB211-535E4 series, also provides QEC kit and module change on CFM56 series. //

Expanded cooperation with OHS

Lufthansa Bombardier Aviation Services

// OHS Aviation Services, the specialist for interior design of business jets, and Lufthansa Bombardier Aviation Services (LBAS), a Lufthansa Technik joint venture and leading maintenance facility exclusively for Bombardier business jets, now offer more services from a single source.

"We now want to expand our successful cooperation in the form of joint customer acquisition abroad and rely on combined refurbishment and maintenance product packages," says Christoph Meyerrose, CEO of Lufthansa Bombardier Aviation Services. For the customer, refurbishment services are attractively priced and optimally integrated into a forthcoming check. Even short-term requests are served. OHS has also expanded its engineering sector: besides "Minor Changes", the EASA Part 21J-certified Design Organization can now permit "Major Changes" and Supplemental Type Certificates for all aircraft categories. At Berlin Schönefeld airport, LBAS and OHS offer a comprehensive maintenance and refurbishment program, including engineering services. The close proximity of both companies allows a straight forward common customer care which has proven to be very efficient over the years. //
